

## Habits of Mind #6

### A Children's Story

Write a children's story (not a school lesson) that uses at least five quantities with large values in ways that will help children understand how big the values really are. Include references to places, things, and events that make sense to them. The story should have between 500 and 1000 words. (Do you have a feel for how many pages this is?)

**Special Instructions:** This assignment should be done individually and should be typed.

**Due Date:** At the beginning of class on Wednesday, October 13.
